

VOLTR

VOLTR PROGRAM

Athletic Strength

8 weeks · 3 sessions per week · 60 to 80 minutes · full gym

LUKAS PLASSNIG · VOLTR.AT

How this program works

THE PLAN

Eight weeks, three sessions a week, 60 to 80 minutes each. Each session starts with power work while you are fresh, then one heavy compound lift, paired accessories, trunk work and a loaded carry. Two blocks: block 1 builds volume, block 2 lowers reps and raises load. Week 1 and week 8 are measured.

WHO IT IS FOR

Adults with one to two years of consistent lifting who want to be strong and athletic at the same time. You squat, hinge and press with solid technique, train in a full gym and commit three sessions a week.

WHO IT IS NOT FOR

Beginners who are still learning the main lifts.
 Anyone with a current injury, or a medical condition that has not been cleared for hard training.
 Runners building towards a race: use the Hybrid plan.
 Weeks where 45 minutes is the honest maximum: use the 3-Day Minimum plan.

EQUIPMENT

Barbell and rack, bench, trap bar, dumbbells, kettlebell, cable station, landmine, plyo box, medicine ball (3 to 6 kg) and a solid wall to throw against. A sled is optional.

THE WEEK

Three sessions in order, A, B, C, ideally with a day off between them. Never A and C back to back, both load the legs and back. Off days: walk, easy cardio or mobility.

HOW TO READ THE SHEET

The spreadsheet has the tabs START HERE (this page), BLOCK 1 (weeks 1 to 4), BLOCK 2 (weeks 5 to 8), LOG.

Each block tab lists the three training days as rows and the four weeks as column groups. Each week has two columns: the target and an empty Load column for you.

Target format: sets x reps @ RIR. 4 × 6 @ RIR 2 means four sets of six reps, each set ending with two reps in reserve. /side means each arm or leg. 3a and 3b are a pair: one set of 3a, rest as listed, one set of 3b, rest as listed, repeat. Take the full rest on main lifts.

Tempo: lowering, pause at the bottom, lifting, pause at the top, in seconds. X means as fast as possible.

RIR AND RPE

RIR means reps in reserve: how many more clean reps you could have done when you end the set. RPE is the same scale counted the other way: RPE 8 equals RIR 2, RPE 9 equals RIR 1.

Choose the load from the target RIR. Most people underestimate what was left by about one rep, more on higher-rep sets. If the last rep moved as fast as the first, add load next time.

PROGRESSION

Main lifts (squat, bench press, trap bar deadlift): linear load progression. Week 1 sets the load. Then add 2.5 to 5 kg on squat and deadlift, 1 to 2.5 kg on bench, each week the previous sets matched the target RIR. If not, repeat the load.

Accessories: double progression. When all sets reach the top of the rep range at the target RIR, add the smallest step and start at the bottom again.

Power work: every rep at maximal intent. End the set when height, distance or speed drops.

Week 4: deload, fewer sets, week-2 loads, RIR 3 to 4. Block 2 starts with roughly your week 3 loads at lower reps. Week 1 opens each main lift with a benchmark top set of 5 at RIR 2. Week 8 is the test: one top set of 3 at RPE 9, two back-off sets. Both top sets go into the e1RM table on the LOG tab.

WARM-UP

8 to 10 minutes: 3 minutes bike, rower or skipping. 90/90 hip switch x 6 per side, world's greatest stretch x 4 per side, glute bridge x 10, band pull-apart x 15, pogo hops 2 x 10. Then ramp-up sets on the first main lift: empty bar x 8, then three or four sets with falling reps up to the working load. They do not count.

MISSED SESSIONS AND BAD WEEKS

Missed one session: do the next session in order. Never two sessions in one day, never skip ahead.

Missed a full week: repeat the last complete week, then continue.

Bad day (sleep, travel, stress): sets and reps stay as written, the load follows the target RIR. Log it.

Two sessions in a row clearly below previous loads: check sleep, food and workload first, fix the cause, then continue as written.

HOW TO LOG

Write the load in kg into the Load cell after the last working set. Different loads per set: 100, 102.5, 102.5. Reps short of the target: 100 x 5, 5, 4.

Fill in the LOG tab once a week, and the benchmarks in week 1 and week 8. The log decides next week's load.

Block 1 • weeks 1 to 4 • build

Block 1 builds the volume that block 2 turns into heavier lifting. Each session opens with power work, then one main lift, then accessories, trunk and a carry. Main lifts: add load each week as long as the target RIR holds. Week 4 is the deload: fewer sets, week-2 loads, RIR 3 to 4. Week 1 includes the benchmarks: broad jump, main-lift top sets, max chin-ups and the farmer carry test. Order of sessions: A, B, C.

Day A • Lower + Power

Squat focus, vertical pull, anti-rotation. About 70 minutes.

1 Box jump

Choose a box you land on softly in a quarter to half squat. Step down every rep and reset.

TEMPO X • REST 90 S

WK 1 • BUILD

Broad jump test: best of 3 (benchmark), then 3 × 3

WK 2 • BUILD

4 × 3

WK 3 • BUILD

4 × 3

WK 4 • DELOAD

2 × 3

2 Back squat

Brace before you unrack. Sit down between the heels, knees track over the toes. Chest and hips rise together.

Off

Block 2 · weeks 5 to 8 · intensify + test

Block 2 keeps the three main lifts and moves to lower reps and heavier loads. Power work and several accessories change. Start week 5 on the main lifts with roughly your week 3 loads. Week 8 is the test: build to one top set of 3 at RPE 9, then two back-off sets at RIR 3. Broad jump, chin-up and farmer carry tests sit in the same sessions as in week 1. Write the top sets into the benchmarks on the LOG tab.

Day A · Lower + Power

Heavier squat, weighted pull, rotation. About 70 minutes.

1 Standing broad jump

Swing the arms, jump as far as you can, stick the landing for 2 s. Walk back, reset.

TEMPO X · REST 90 S
