

VOLTR

VOLTR PROGRAM

Hybrid

8 weeks · 3 strength sessions + 3 runs per week · full gym

LUKAS PLASSNIG · VOLTR.AT

How this program works

THE PLAN

Eight weeks, three strength sessions of 50 to 65 minutes and three runs per week. Running volume rises steadily, and heavy leg work sits at least 48 hours before the quality run. Week 1 and week 8 both include a 3 km time trial and top sets on the main lifts, so you see whether you got stronger and faster together.

WHO IT IS FOR

Adults with at least a year of consistent lifting who can run 40 minutes easy without stopping and want strength and running to improve together.

WHO IT IS NOT FOR

Runners in the last 12 weeks before a marathon or ultra: race-specific running needs more volume.

Beginners in lifting or running.

Anyone with a current injury, or a medical condition that has not been cleared for hard training.

Weeks where six sessions will not fit: use the 3-Day Minimum plan.

EQUIPMENT

Full gym: barbell, rack, trap bar, dumbbells, cable station, landmine. A watch with a timer. A heart rate strap helps.

THE WEEK

Monday: Strength A (heavy legs)

Tuesday: Run 1, easy

Wednesday: Strength B (upper body)

Thursday: Run 2, quality

Friday: Strength C (full body, moderate legs)

Saturday: off

Sunday: Run 3, long

The days can move, the rules stay: heavy legs at least 48 hours before the quality run, moderate legs the day after it, at least 6 hours between a lift and a run on the same day. Only two runs possible: drop Run 1.

HOW TO READ THE SHEET

The spreadsheet has the tabs START HERE, BLOCK 1 (weeks 1 to 4), BLOCK 2 (weeks 5 to 8), LOG.

In the spreadsheet, rows are the three strength days and the three runs, column groups are the weeks. Each week has a target and an empty column for you: load in kg for lifts, total time and average effort for runs (52 min, effort 4).

3 × 5 @ RIR 2 means three sets of five, each ending two reps short of failure. /side means each arm or leg. 3a and 3b are a pair: one set of each, rest as listed on each line, repeat.

6 × 2 min @ effort 8, 2 min jog means six hard two-minute efforts with two minutes of easy jogging between.

Tempo: lowering, pause at the bottom, lifting, pause at the top, in seconds. X means as fast as possible.

RUNNING ZONES AND EFFORT

Running effort uses its own 1 to 10 scale. It is not the same as lifting RPE.

Zone 2 (Z2), easy: effort 3 to 4, full sentences, nose breathing most of the time. With a heart rate monitor, roughly 65 to 75 percent of max heart rate.

Age-based max heart rate formulas can be off by 10 beats or more, so effort comes first.

Tempo: effort 6 to 7, comfortably hard.

Intervals: effort 8, hard and even. The last rep as fast as the first.

Strides: 20 s fast and relaxed, then walk back.

Easy and long runs go by effort. Hills, heat and a hard week slow the pace at the same effort. Keep the effort.

RIR AND RPE

RIR means reps in reserve: how many more clean reps you could have done when you end the set. RPE is the same scale counted the other way: RPE 8 equals RIR 2, RPE 9 equals RIR 1.

Choose the load from the target RIR. Most people underestimate what was left by about one rep, more on higher-rep sets. If the last rep moved as fast as the first, add load next time.

PROGRESSION

Main lifts: add 2.5 kg (lower body) or 1 to 2.5 kg (bench) each week as long as last week's sets matched the target RIR. Accessories: double progression, add the smallest step once all sets reach the top of the rep range. RIR stays at 2 to 3 on most sets so the quality run stays quality.

Running: total time rises in weeks 1 to 3 and 5 to 7. The long run never gets more than about 10 percent longer than your longest run of the previous month, because single long jumps are what drive running injuries.

Week 4: deload for both. Week 8: test week, top sets Monday and Wednesday, 3 km time trial Thursday.

WARM-UP

Strength days, 8 minutes: 3 minutes bike or rower, 90/90 hip switch x 6 per side, world's greatest stretch x 4 per side, glute bridge x 10, band pull-apart x 15, then ramp-up sets on the first lift.

Quality run: 15 minutes easy including leg swings, A-skip 2 × 15 m and 4 strides.

Easy and long runs: the first 10 minutes slower than you want to go.

MISSED SESSIONS AND BAD WEEKS

Missed a strength session: do the next one in order, never two on one day.

Missed the quality run: do it at the next run slot if that is at least 48 hours after Strength A, otherwise skip it this week. Never the day before the long run.

Missed a full week: repeat the last complete week.

Bad day: sets, reps and run efforts stay as written, load and pace follow the effort. Log it.

Legs heavy for more than a week, sleep worse, resting heart rate up: run the week 4 structure once, then continue.

HOW TO LOG

Write the load in kg into the Load cell after the last working set. Different loads per set: 100, 102.5, 102.5. Reps short of the target: 100 × 5, 5, 4.

Fill in the LOG tab once a week, and the benchmarks in week 1 and week 8.

The log decides next week's load.

Block 1 · weeks 1 to 4 · base

Block 1 sets the baseline in week 1 (3 km time trial) and builds strength and running volume together. Lifting stays at RIR 2 to 3 so the runs keep their quality. Running time rises about 10 percent per week. Week 4 is a deload for both: fewer sets, shorter runs, no hard intervals. Suggested week: Mon A, Tue Run 1, Wed B, Thu Run 2, Fri C, Sat off, Sun Run 3.

Day A · Heavy Legs + Pull

Monday. At least 48 hours before the quality run. About 60 minutes.

1 Back squat

Brace before you unrack. Sit down between the heels, knees over toes. Chest and hips rise together.
